2025 3.3-4.28 周一 13:30-14:30 共7堂  
影像前處理、AI應用、自動化分析

## 課程資訊 及 授課教師

2025/3/3(一) 【生物影像分析概論】  
溫榮崑 中央研究院 生化所 生物影像核心設施  
研究助理師

2025/3/10(一) 【生物影像流程與小組討論編組】  
許紹君 臺灣大學分子影像重點技術平台  
助研究專家

2025/3/17(一) 【影像分析自動化】  
張仁乾 日本理化學研究所  
專門技術員

2025/3/24(一) 【互動式影像分析流程建立】  
朱韋臣 中央研究院 細生所 公共儀器室影像組  
專案研發學者

2025/3/31(一) 【物件追蹤分析】  
黃紀穎 中央研究院 植微所 細胞核心實驗室光學顯微鏡組  
專案研究人員

2025/4/7(一) 【AI: 機器學習與深度學習工具介紹】  
羅安琦 臺灣大學分子影像重點技術平台  
副技師

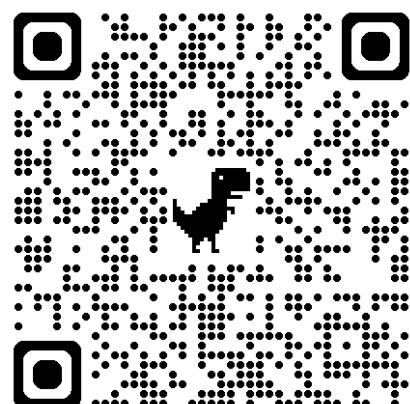

2025/4/28(一) 小組發表  
許紹君 臺灣大學分子影像重點技術平台 助研究專家  
朱韋臣 中央研究院 細生所共儀影像組 專案研發學者

主辦單位：臺大醫學院研發分處 第一共同研究室顯微影像核心  
協辦單位：中央研究院 生物化學研究所  
地點：基醫大樓講堂區 5 樓 未來教室 (原508教室)

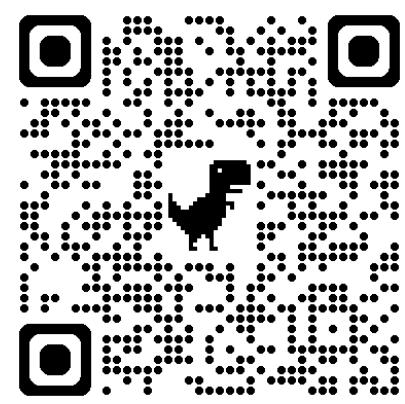

## 上課注意事項：

1. 教室內禁止攜帶食物飲料入內，僅允許“白開水”，請大家將食物飲料放置於教室外的桌上。
2. 請實體與線上學員掃描以下QR code進行線上簽到。
3. 請線上學員於課程開始前關閉自己的麥克風。
4. 線上學員若有問題，請先按下“舉手”，或於聊天室寫下問題，將於課程結束後在場地時間允許下，安排QA時間。
5. 現場學員發問時請使用麥克風才可進行收音。

線上簽到

# BioImage Analysis?

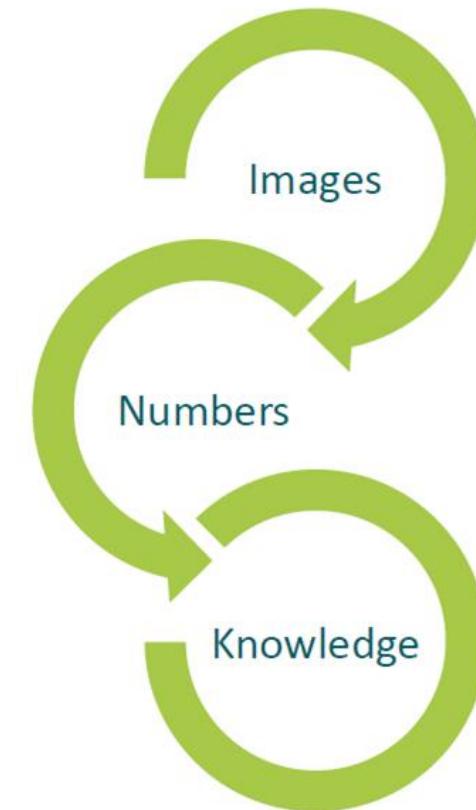

## Image Analysis?

Image analysis (also known as “computer vision” or image recognition) is the ability of computers to **recognize attributes** within an image.

## BioImage Analysis?

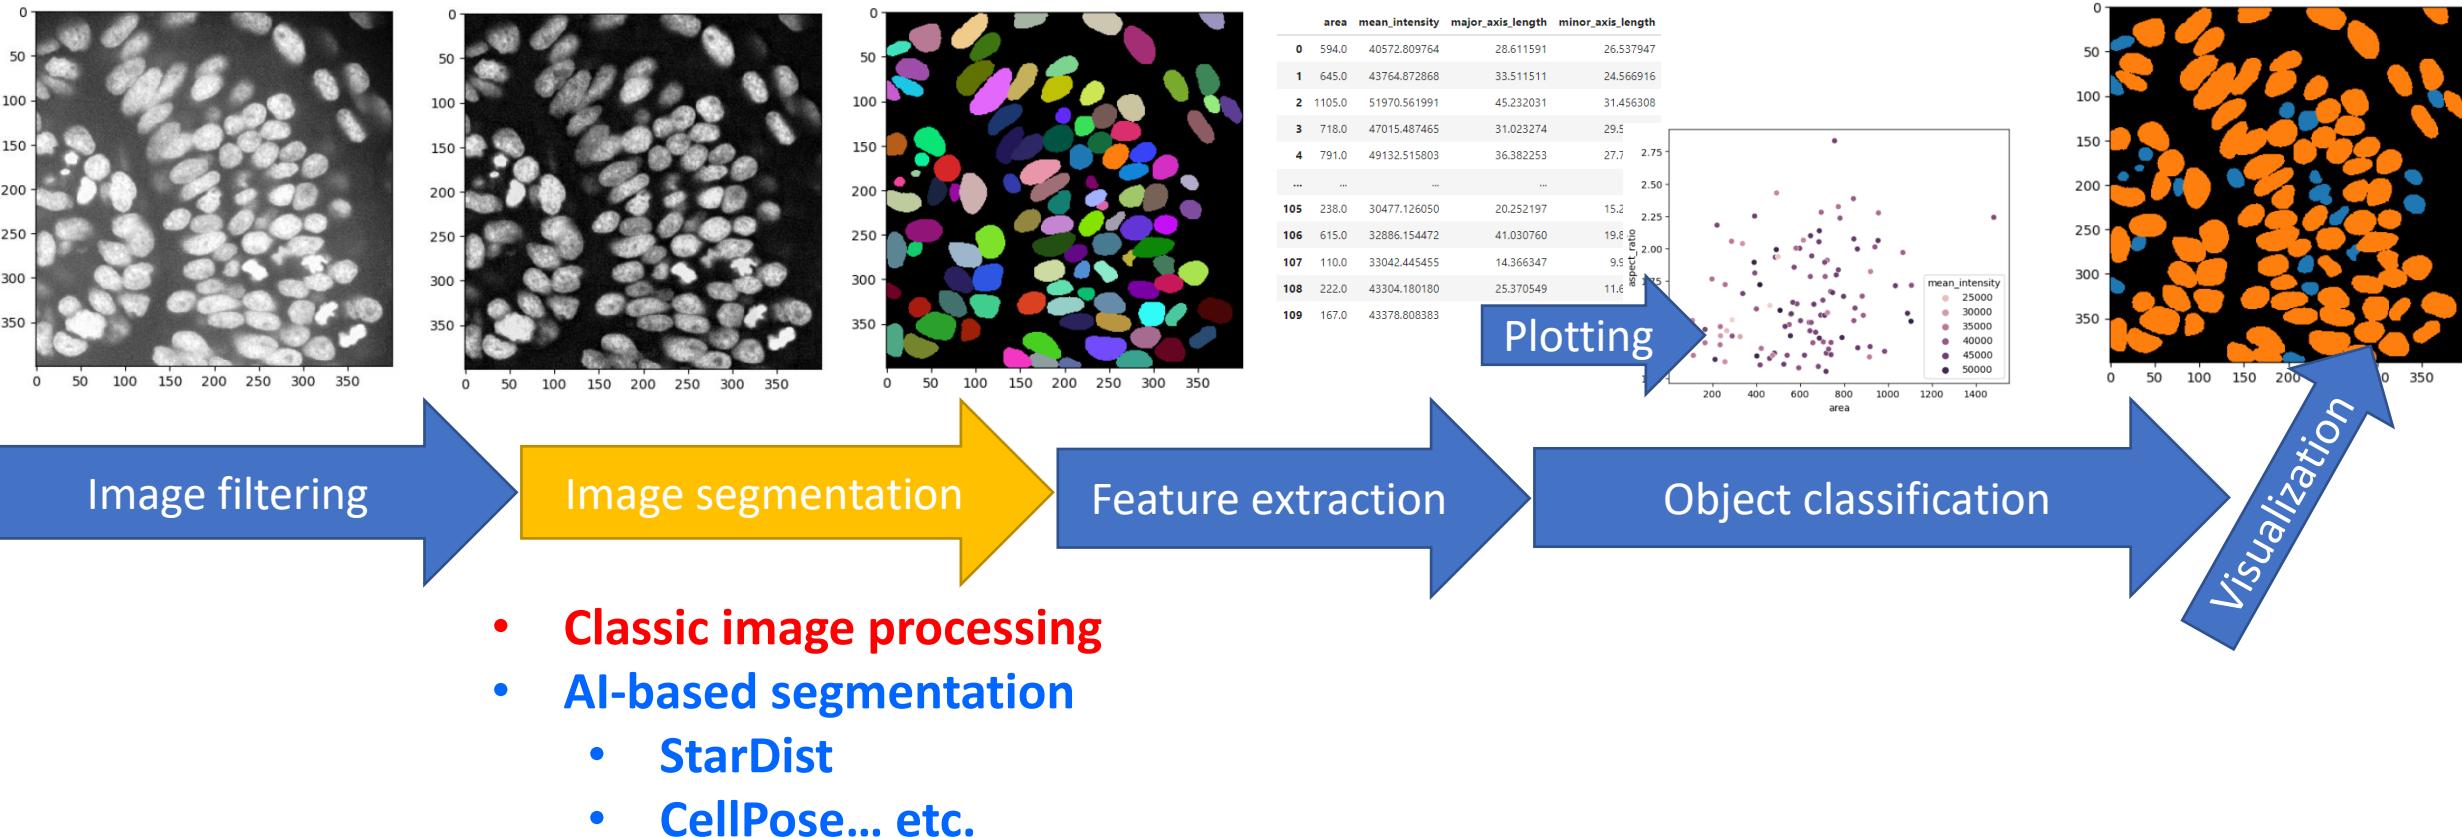

Understanding and quantifying microscopy, medical or any other calibrated image data.

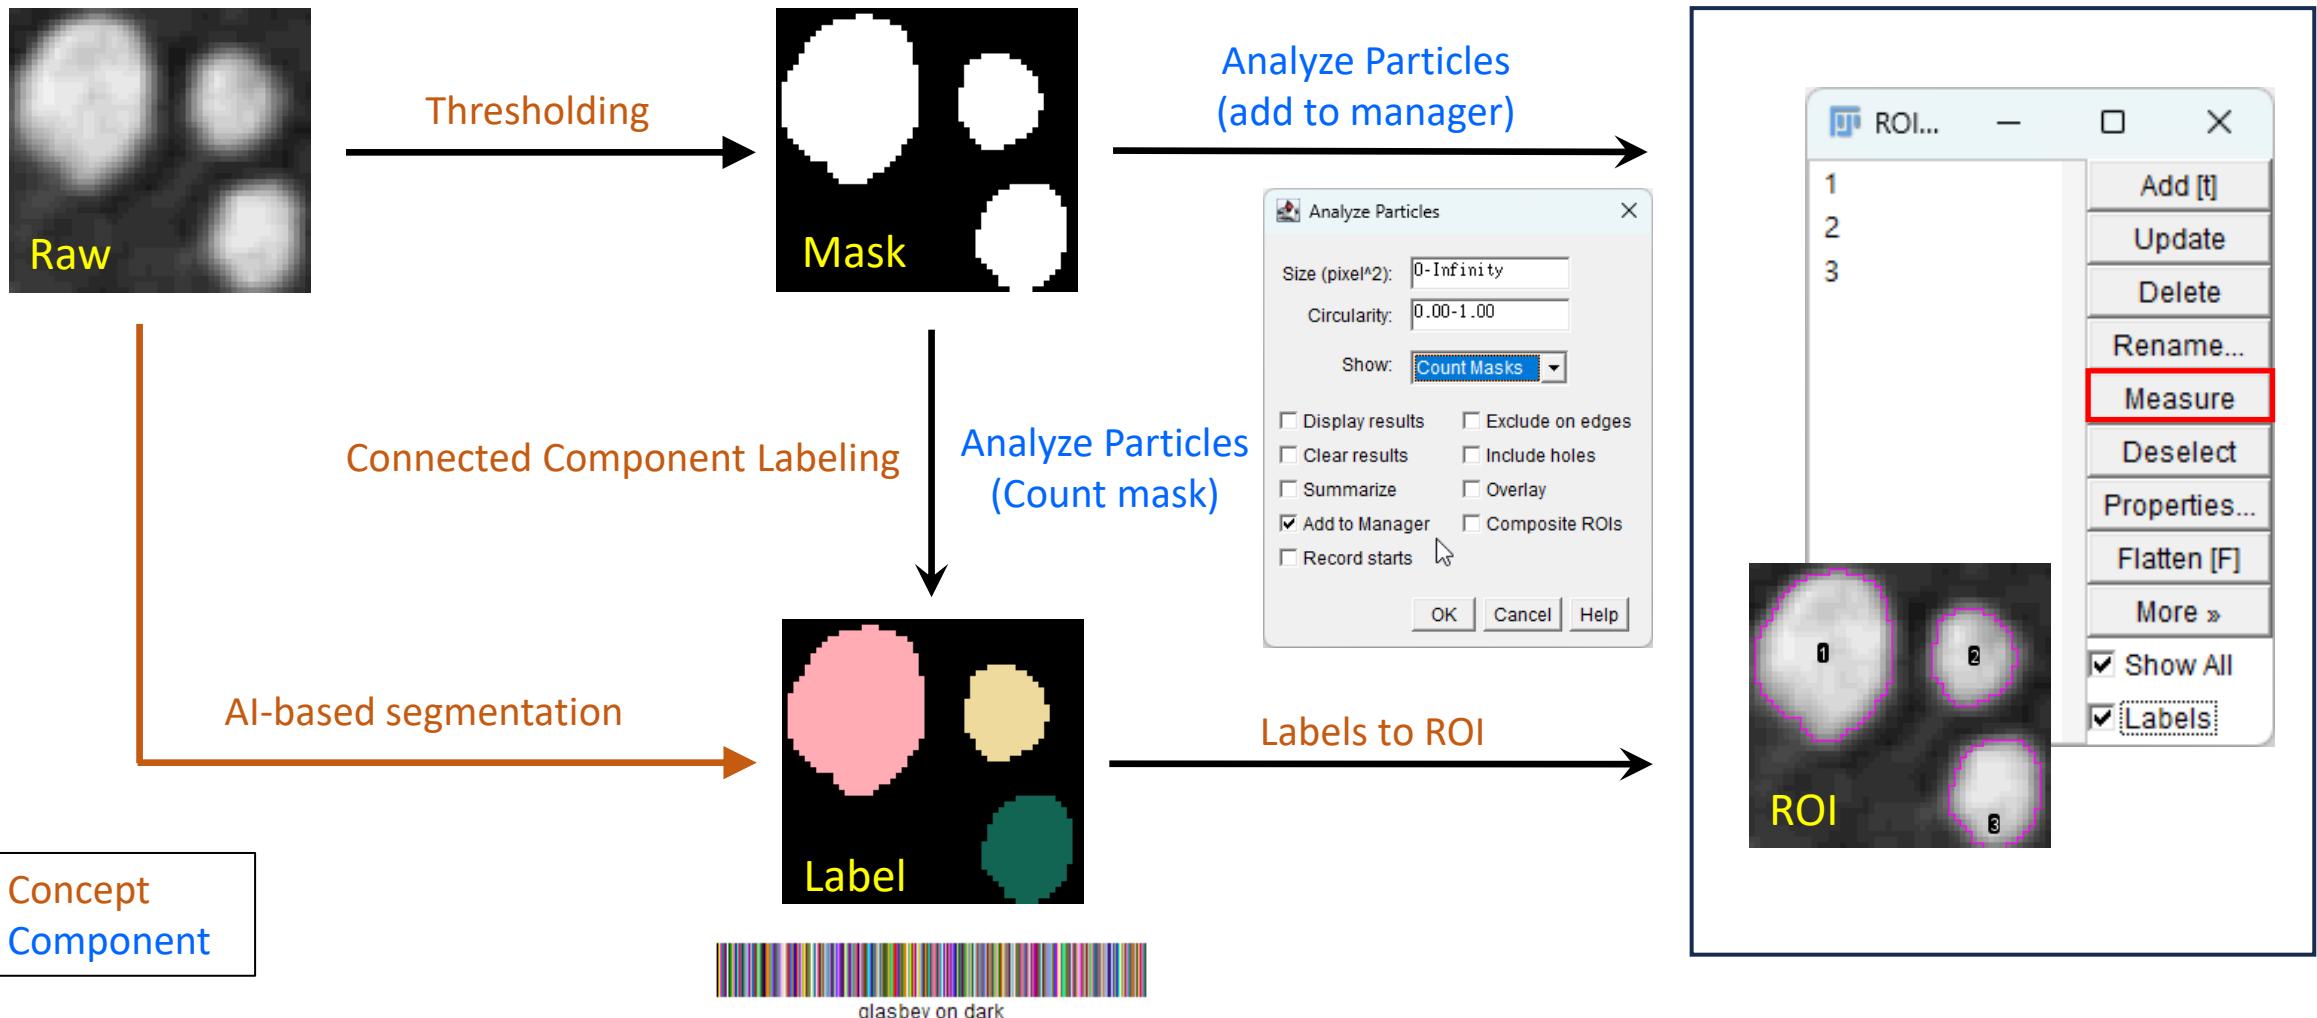

- Objective
- Reliable
- Repeatable
- Reproducible
- Replicable

# Bioimage Analysis Workflow

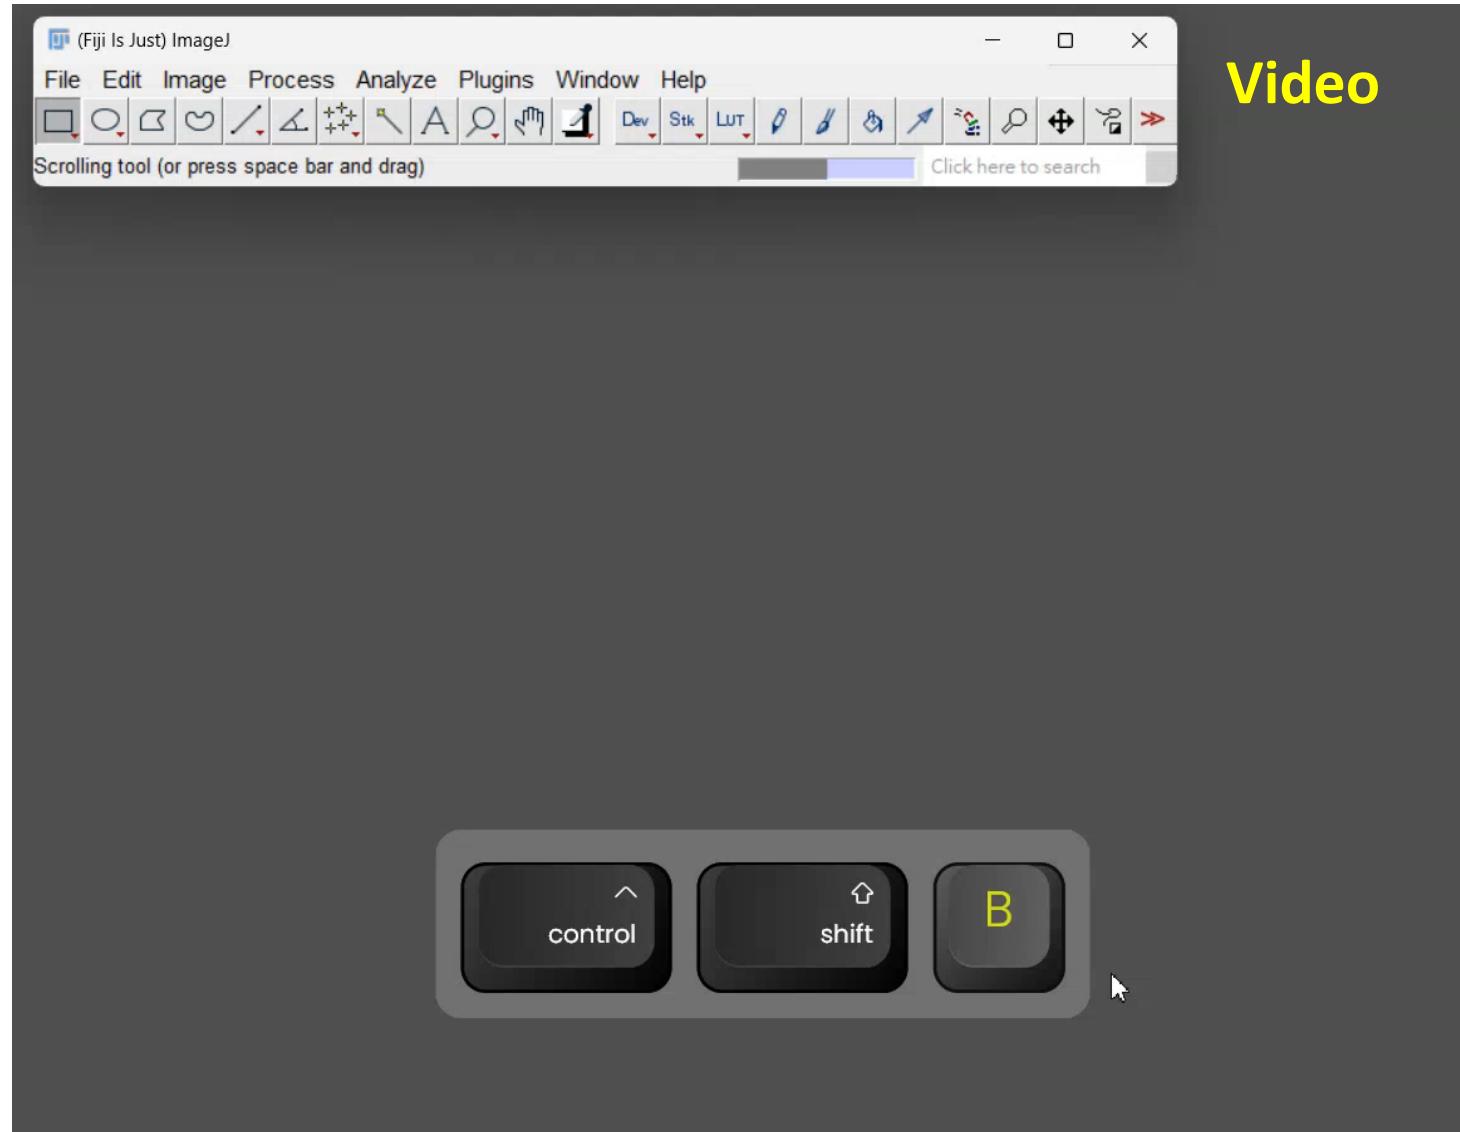

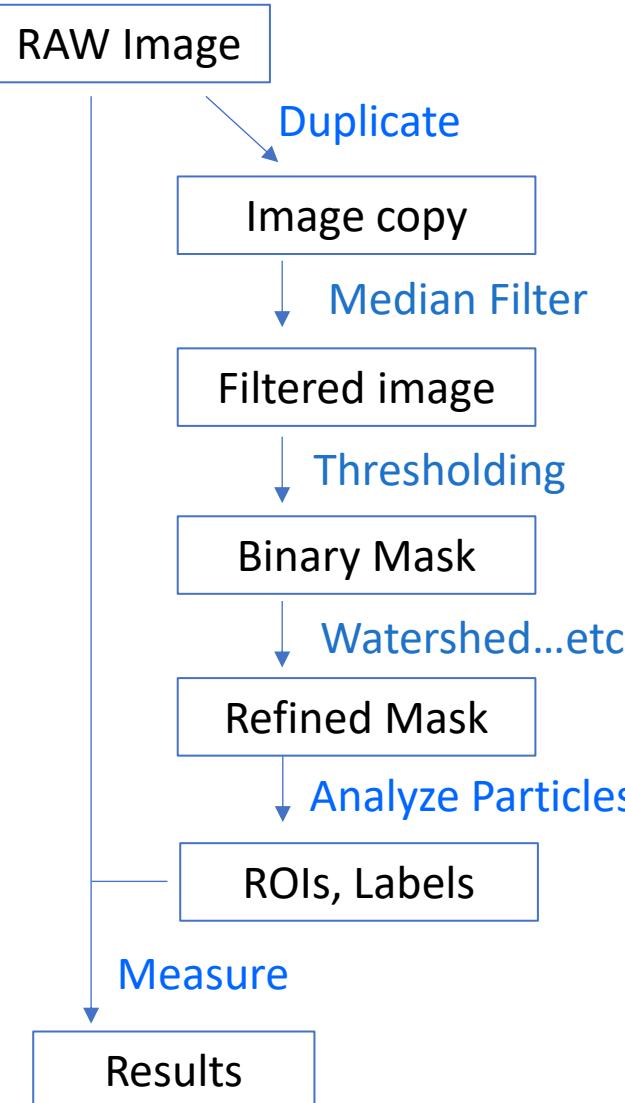

- Goal: Quantify observations, substantiate conclusions with numbers

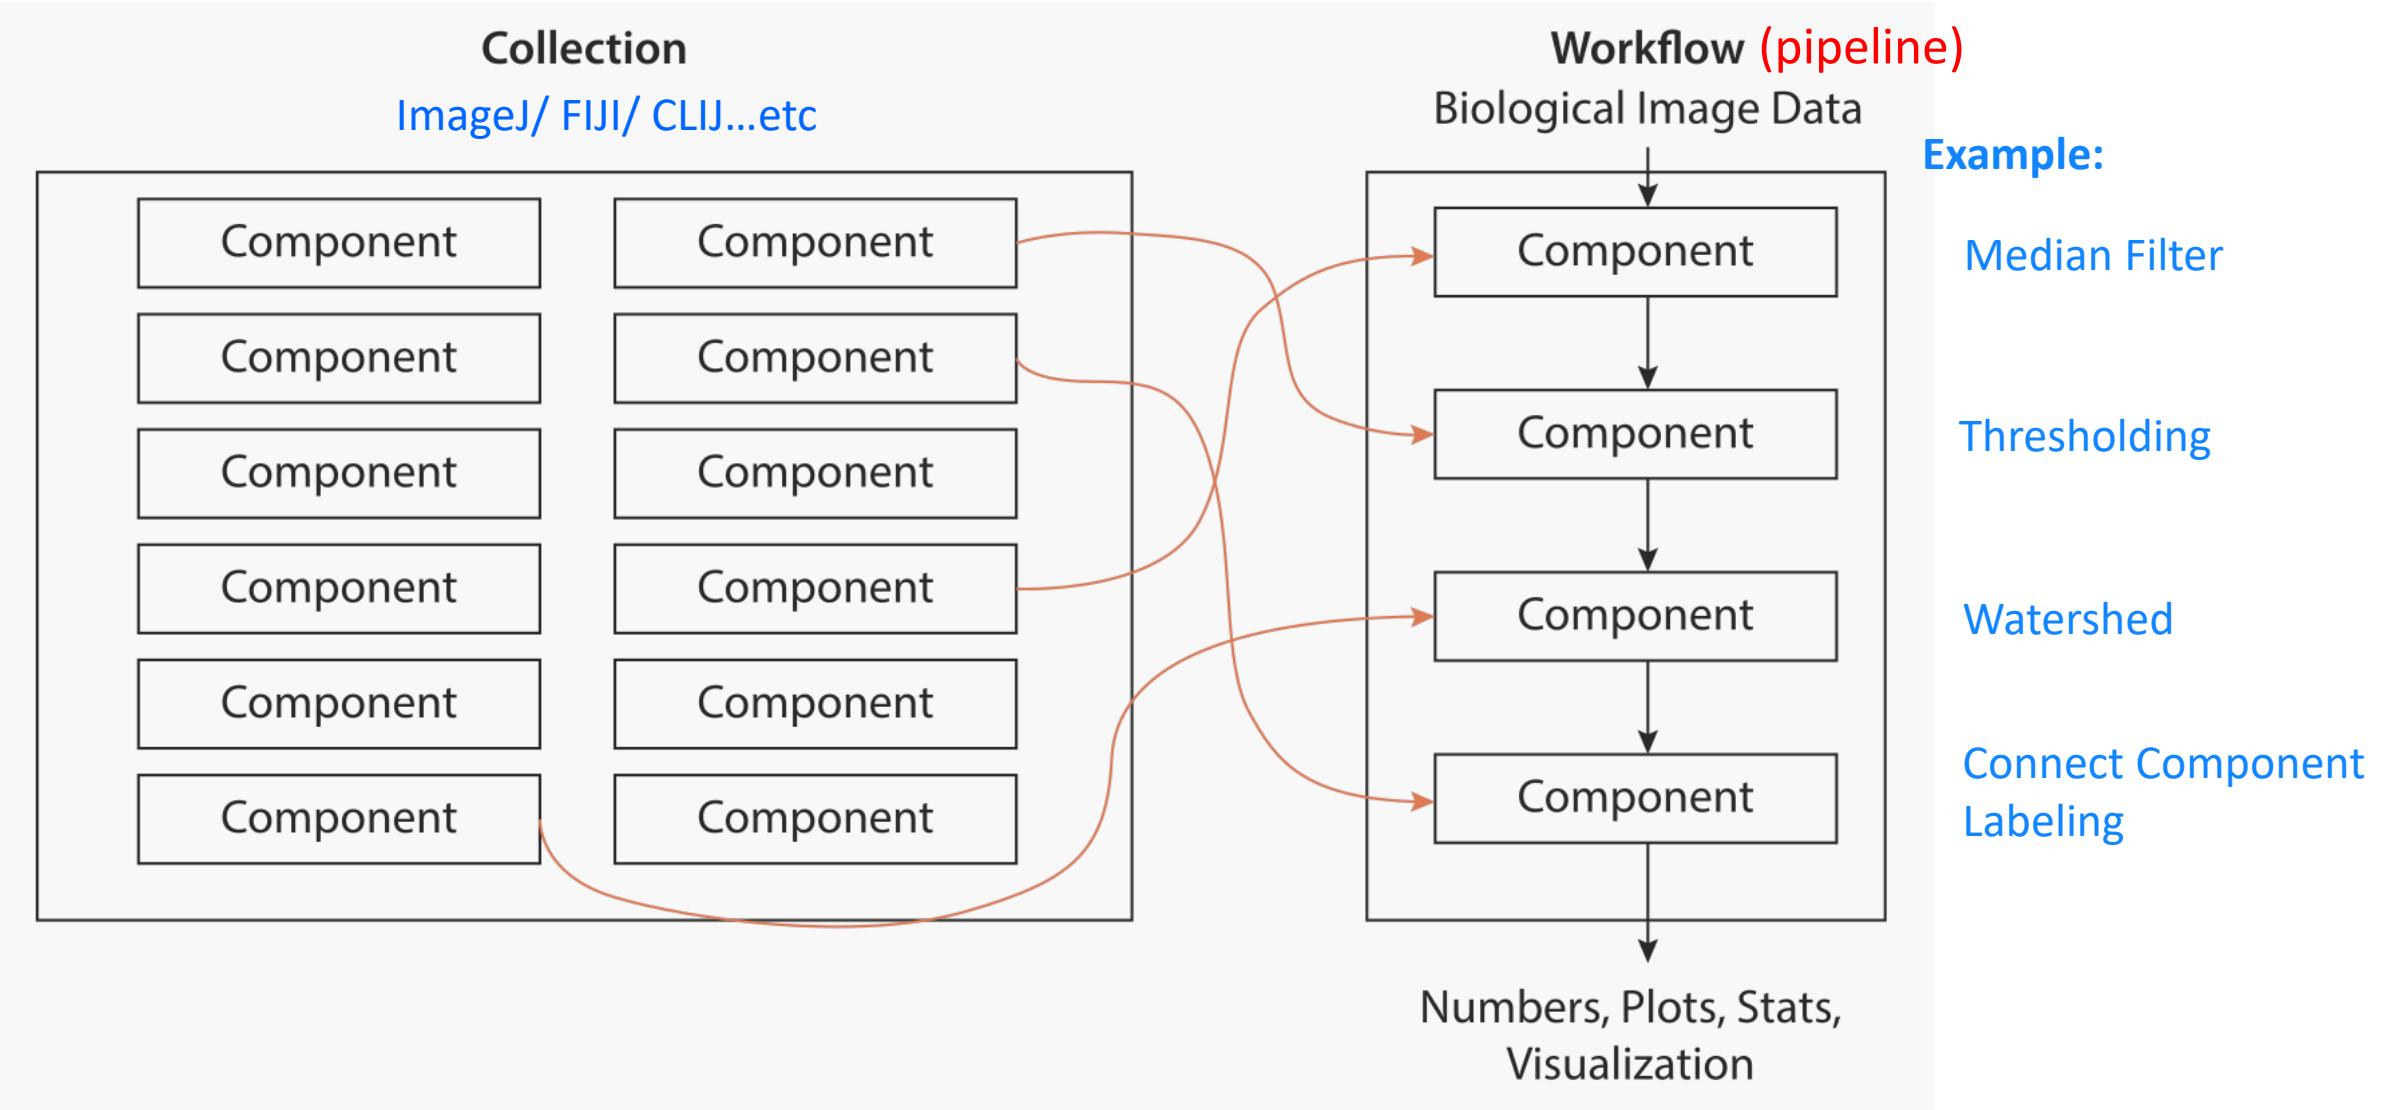

# Segmentation with ROI list, Mask, and Label

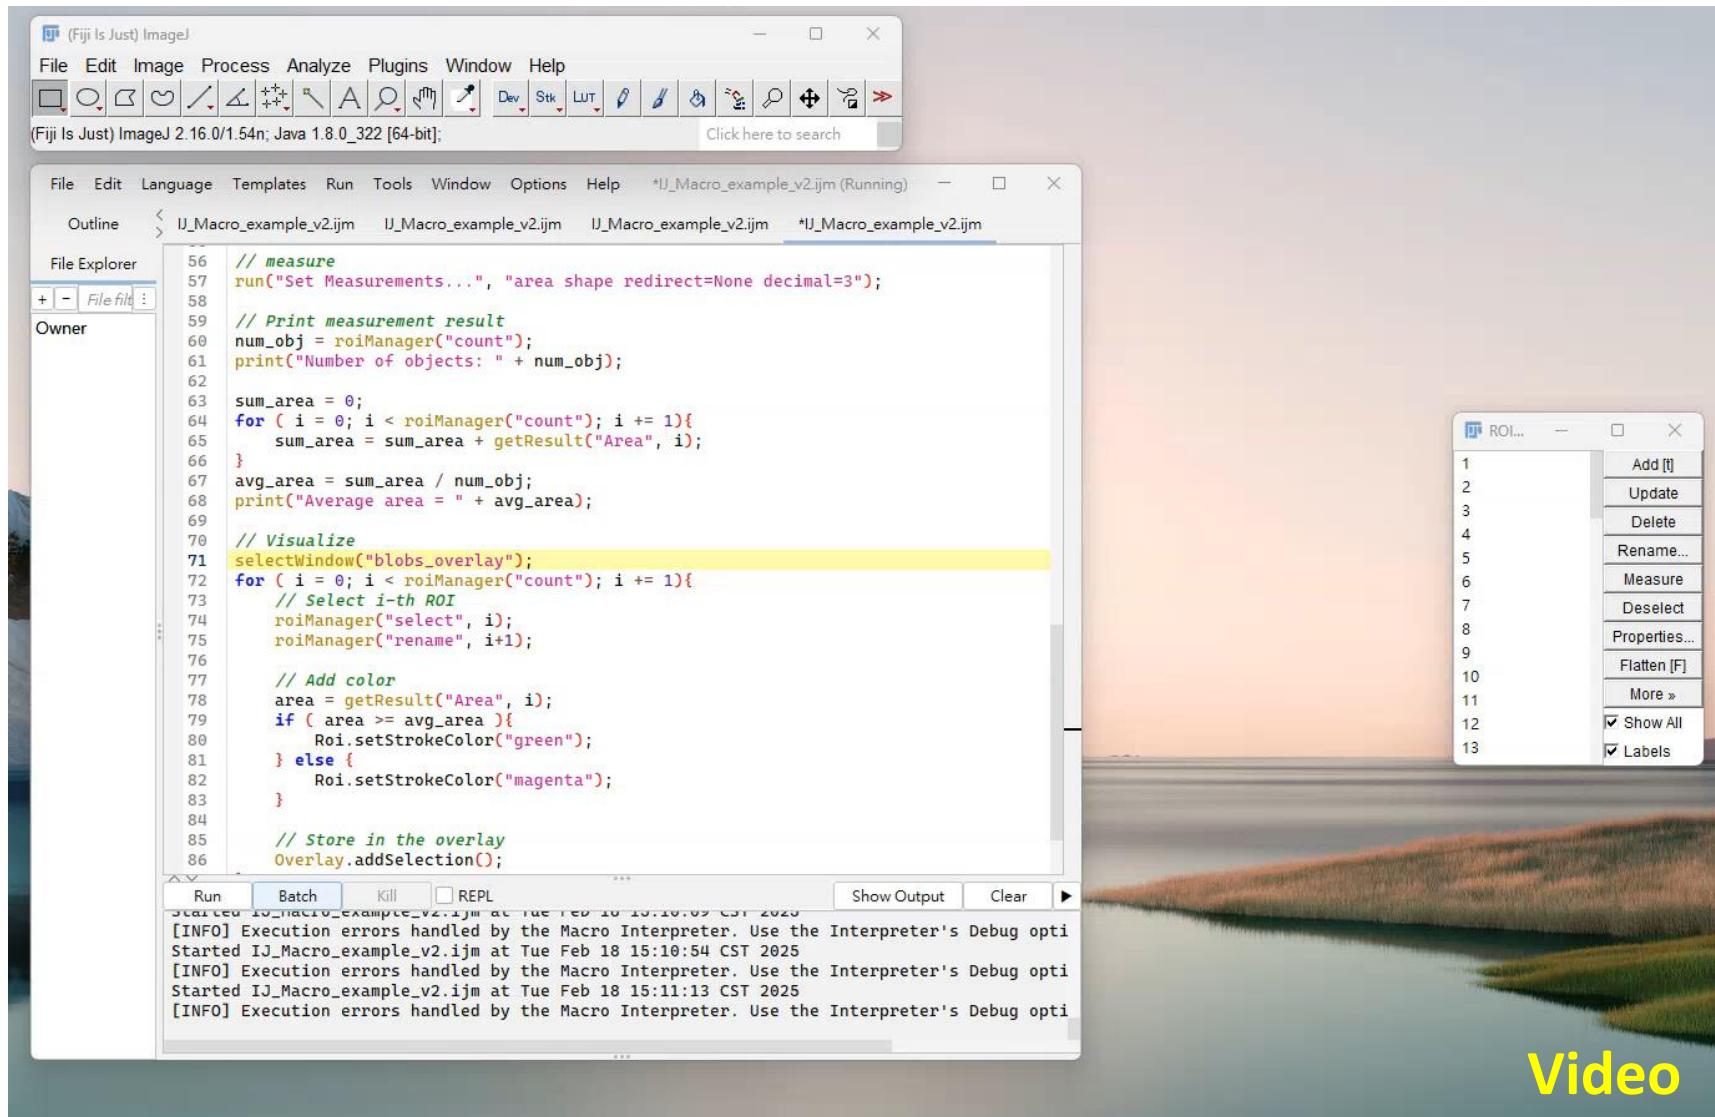

# Recap: Classic workflow in FIJI/ImageJ

# Software -> components, collection and workflow

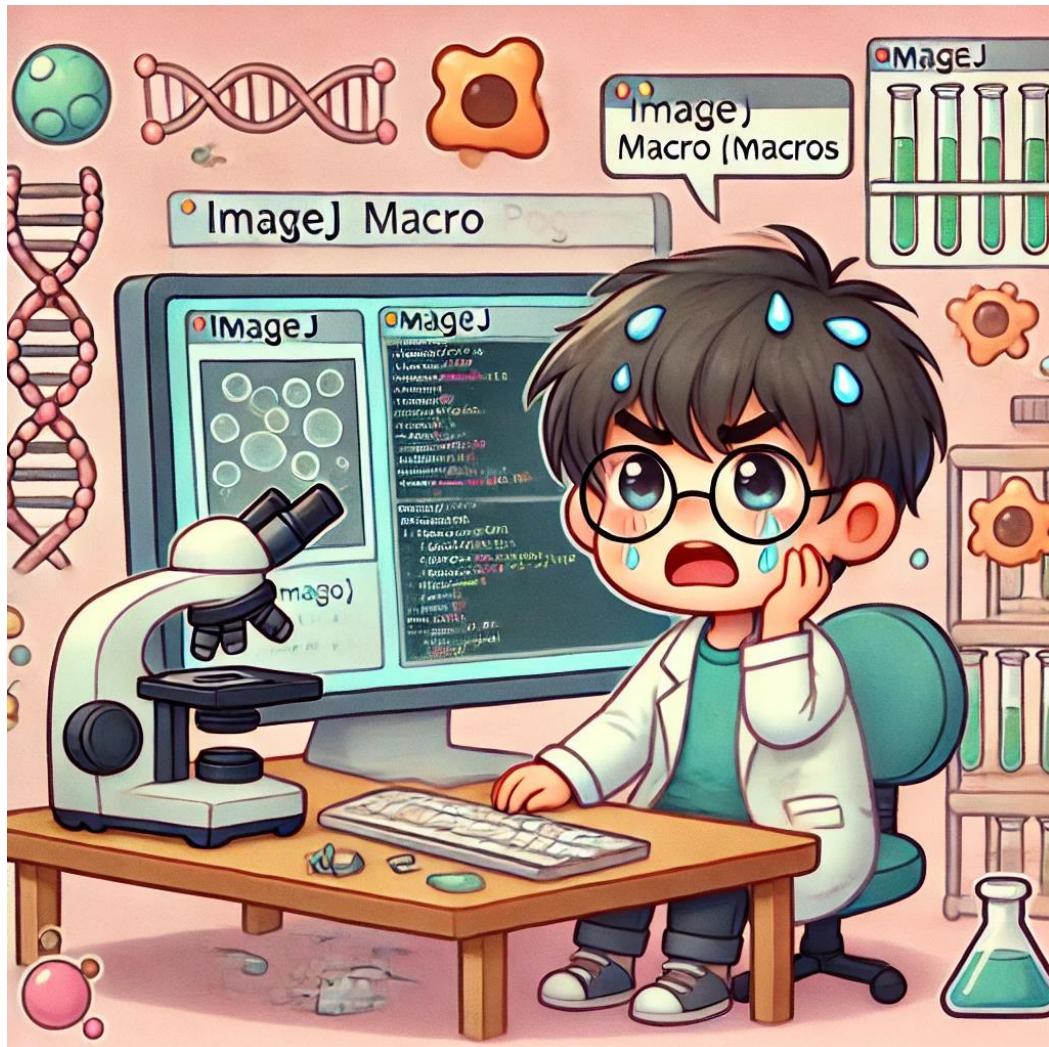

# ImageJ macro allows other people reproduce your workflow and results

Video

ImageJ macro:  
Great documentation for  
your bioimage analysis  
workflow!

# However, many biologists are not good for programming.

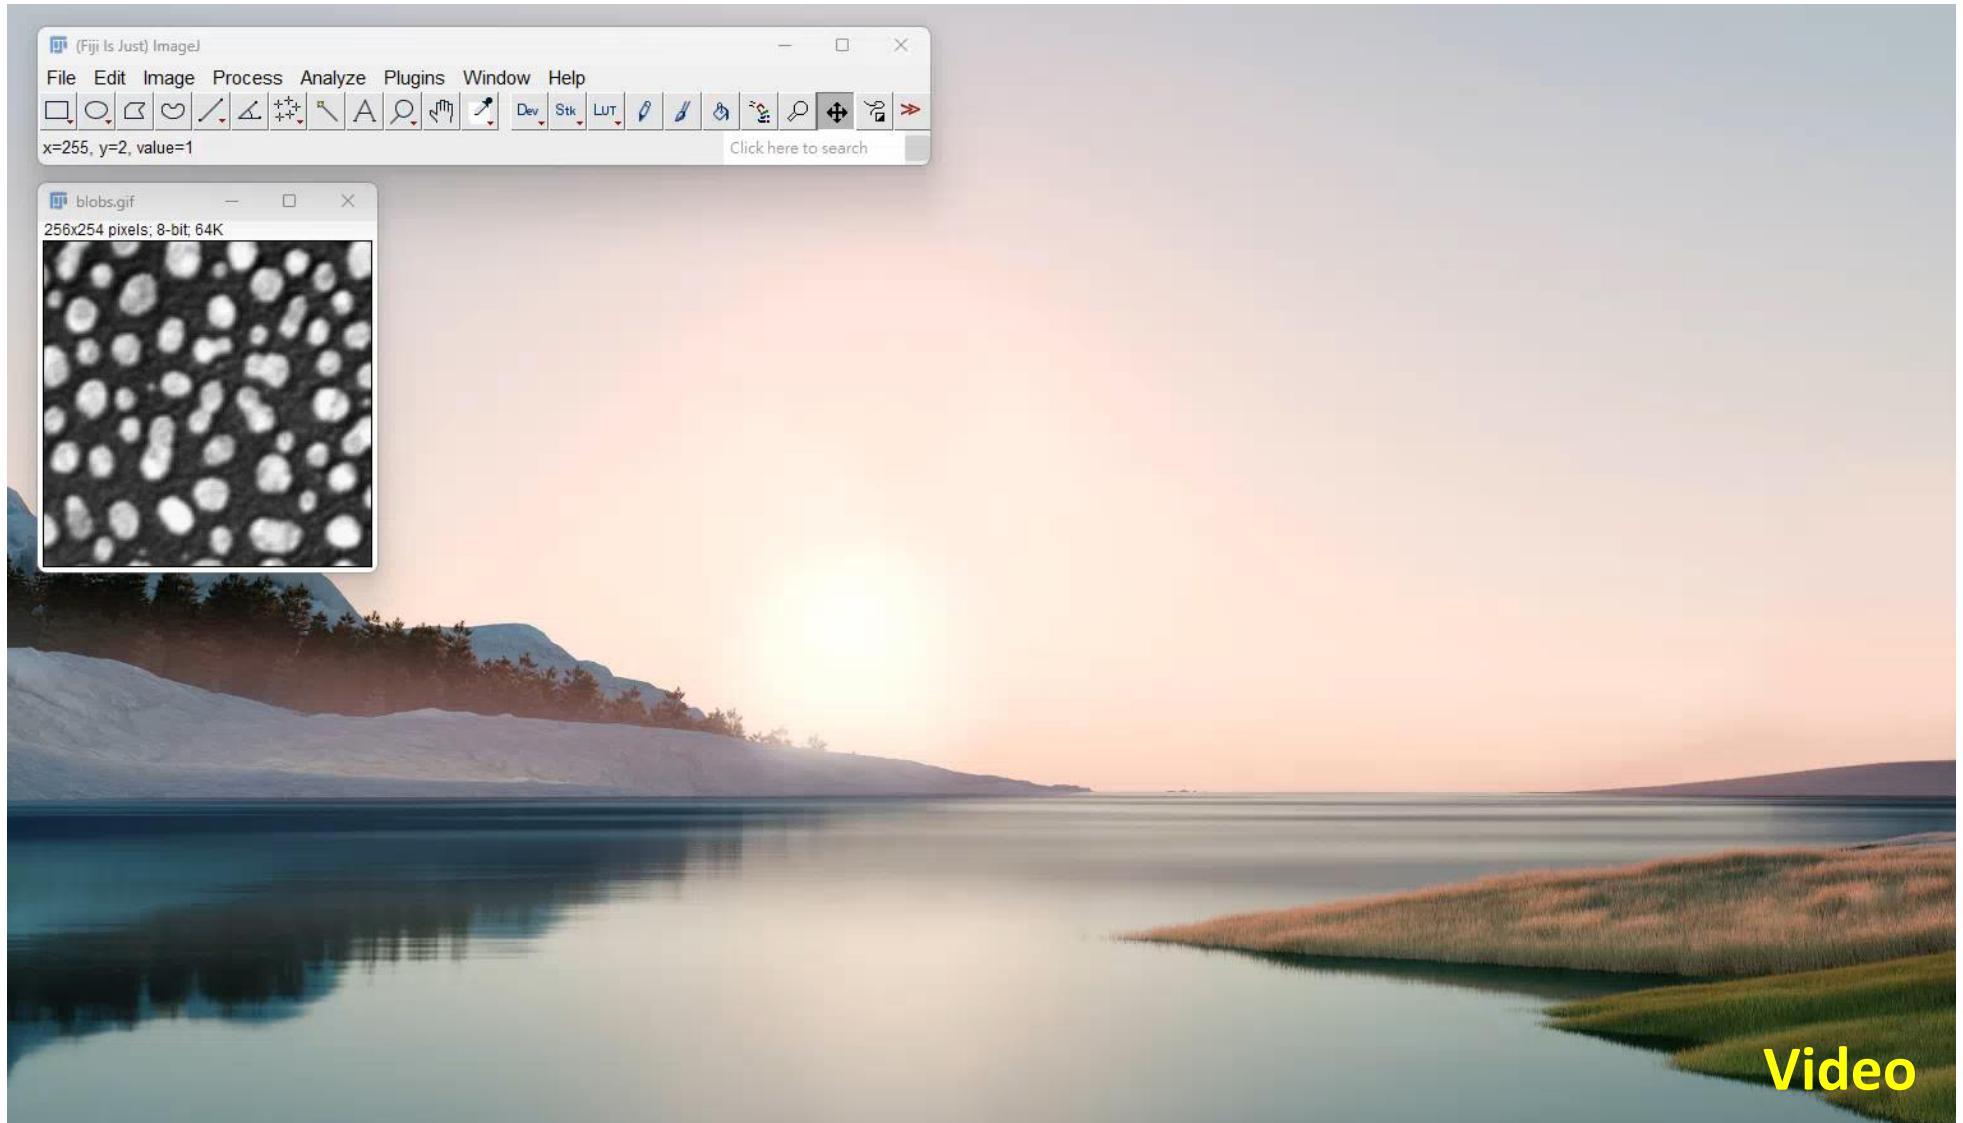

# How can an image analysis workflow be built more efficiently?

- Interactive workflow
- Code generation
- Data visualization
- Documentation
- GPU acceleration

<https://clij.github.io/>

# Why you should learn CLIJ

---

- Interactive workflows
- Automatic code generation (multiple languages)
- Easy data visualization
- Comprehensive documentation
- GPU acceleration
- Advanced image processing libraries
- Can be adapted to Python and Napari (with cI Esperanto)

@weichen01.bsky.social

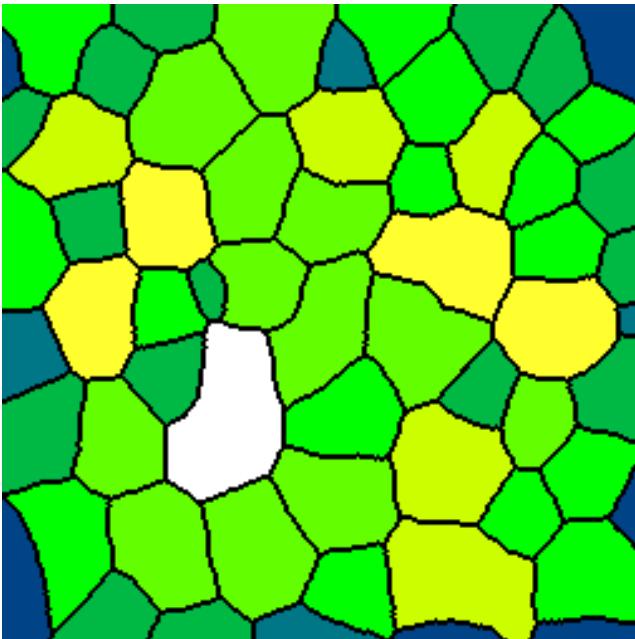

Wei-Chen Chu

課後意見調查

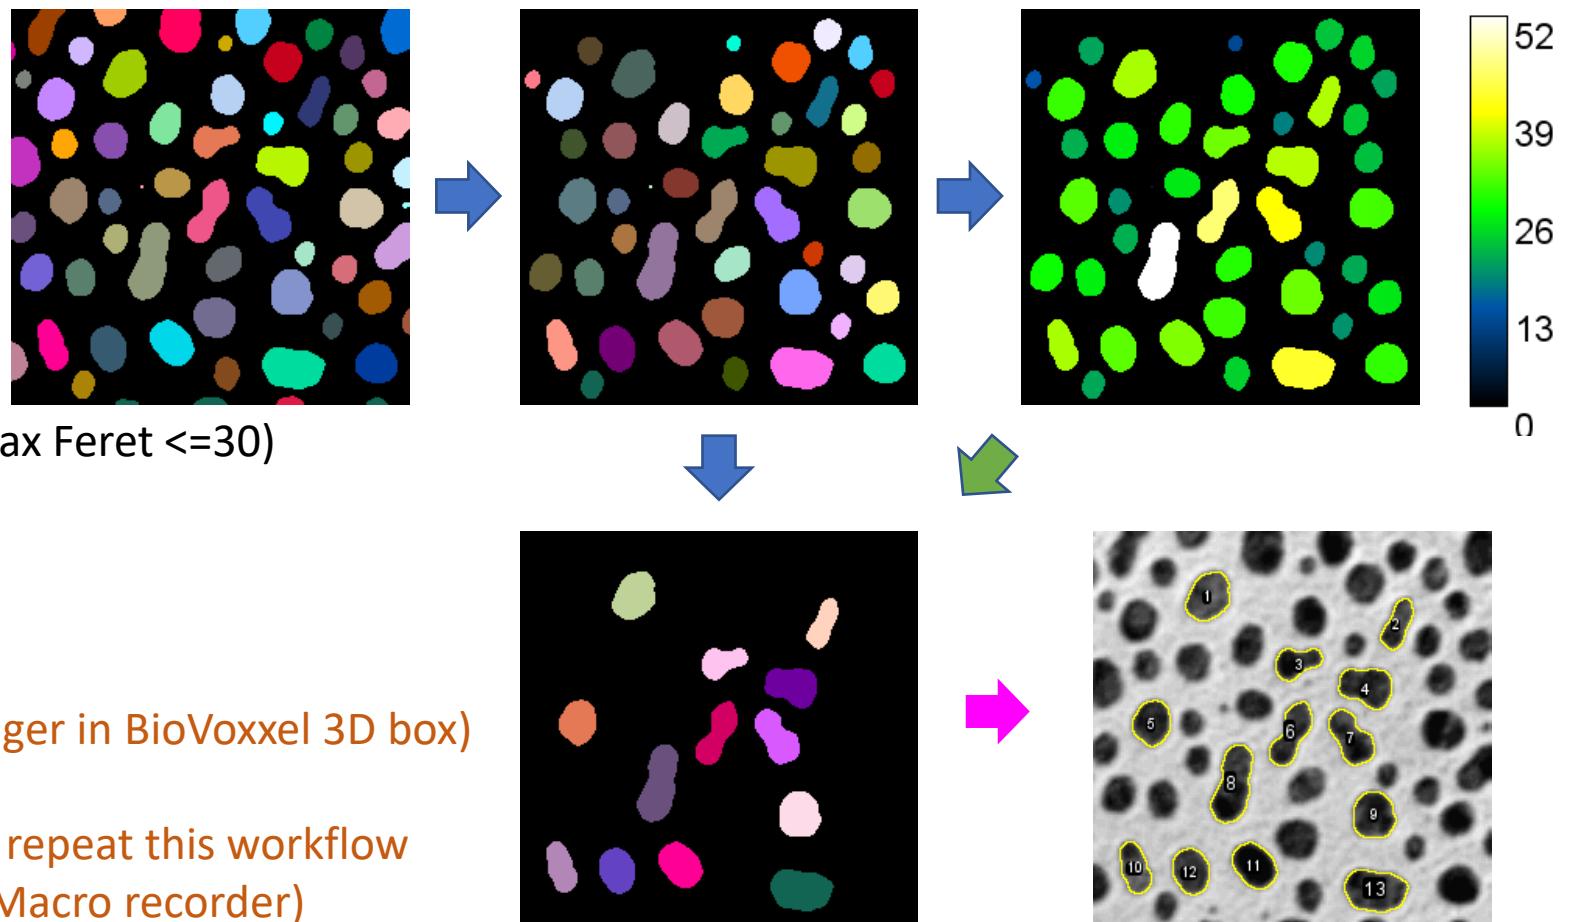

# Excise 1: Segment blobs.gif

- Design a workflow for segmenting blobs.gif (File > Open Samples...)
  - Export the workflow as ImageJ Macro script
  - Refine the ImageJ Macro
  - Save the final label image
- 
- Optional: Export the workflow as Icy Javascript, as Icy protocol and for QuPath as groovy script. Feel free to generate a Fiji plugin.
  - Furthermore, if you only used operations, which are "py" compatible, export a clEsperanto-based Jupyter notebook and a Python script that uses Napari.

## Excise 2: Label processing

- Load the example label image
- Exclude Labels On Edges  
(Hint: using search bar)
- Generate “Maximum Feret Map”
- Exclude the shorter labels (e.g Max Feret  $\leq 30$ )
- Generate an ImageJ Macro
- Convert the final labels to ROIs  
(Hint: using Label to 2d Roi manager in BioVoxcel 3D box)
- Refine the macro to allow you to repeat this workflow  
(Hint: you can also combine the Macro recorder)

# Bonus: How to open the raw image files using ImageJ Macro

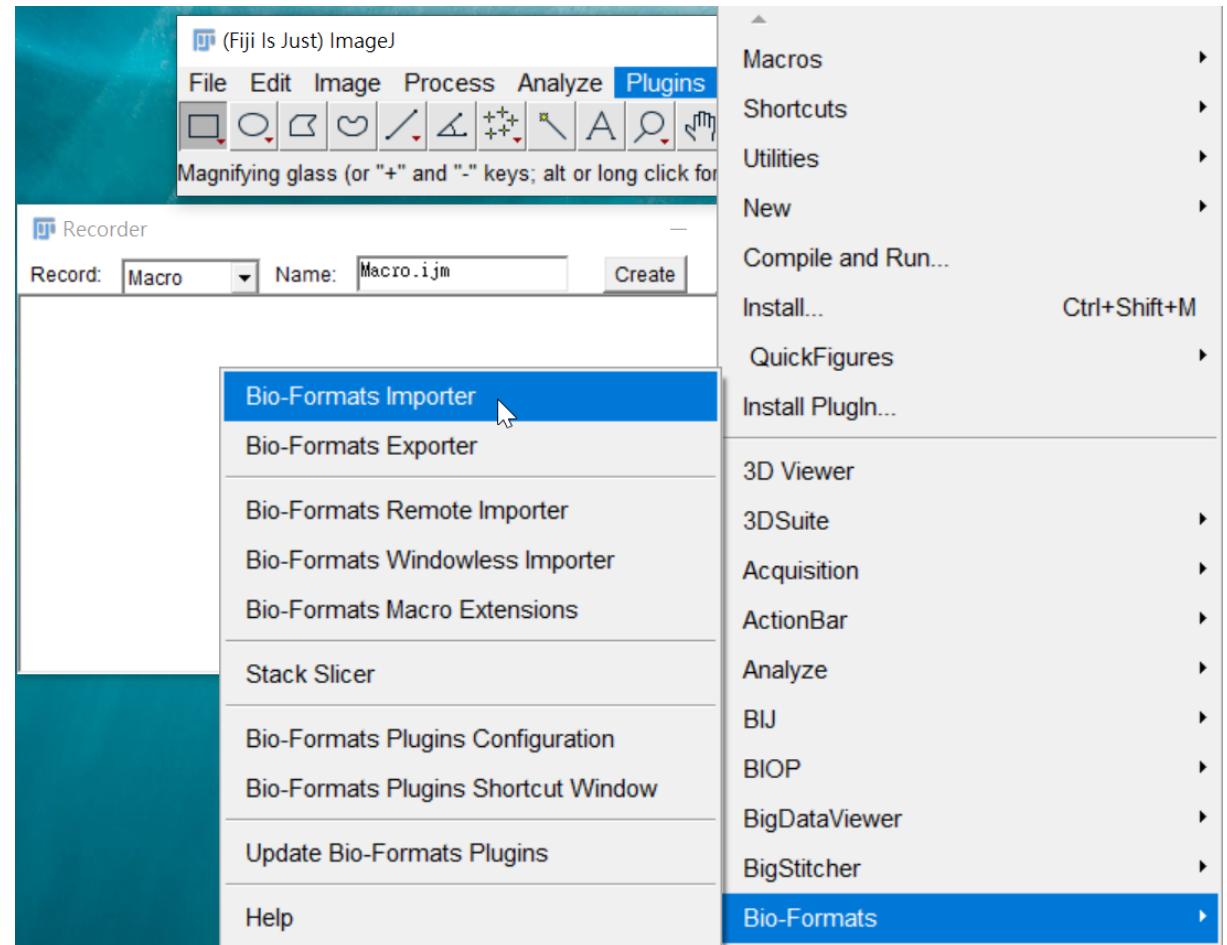

```
open("D:/test.tif");
```

It can be record properly

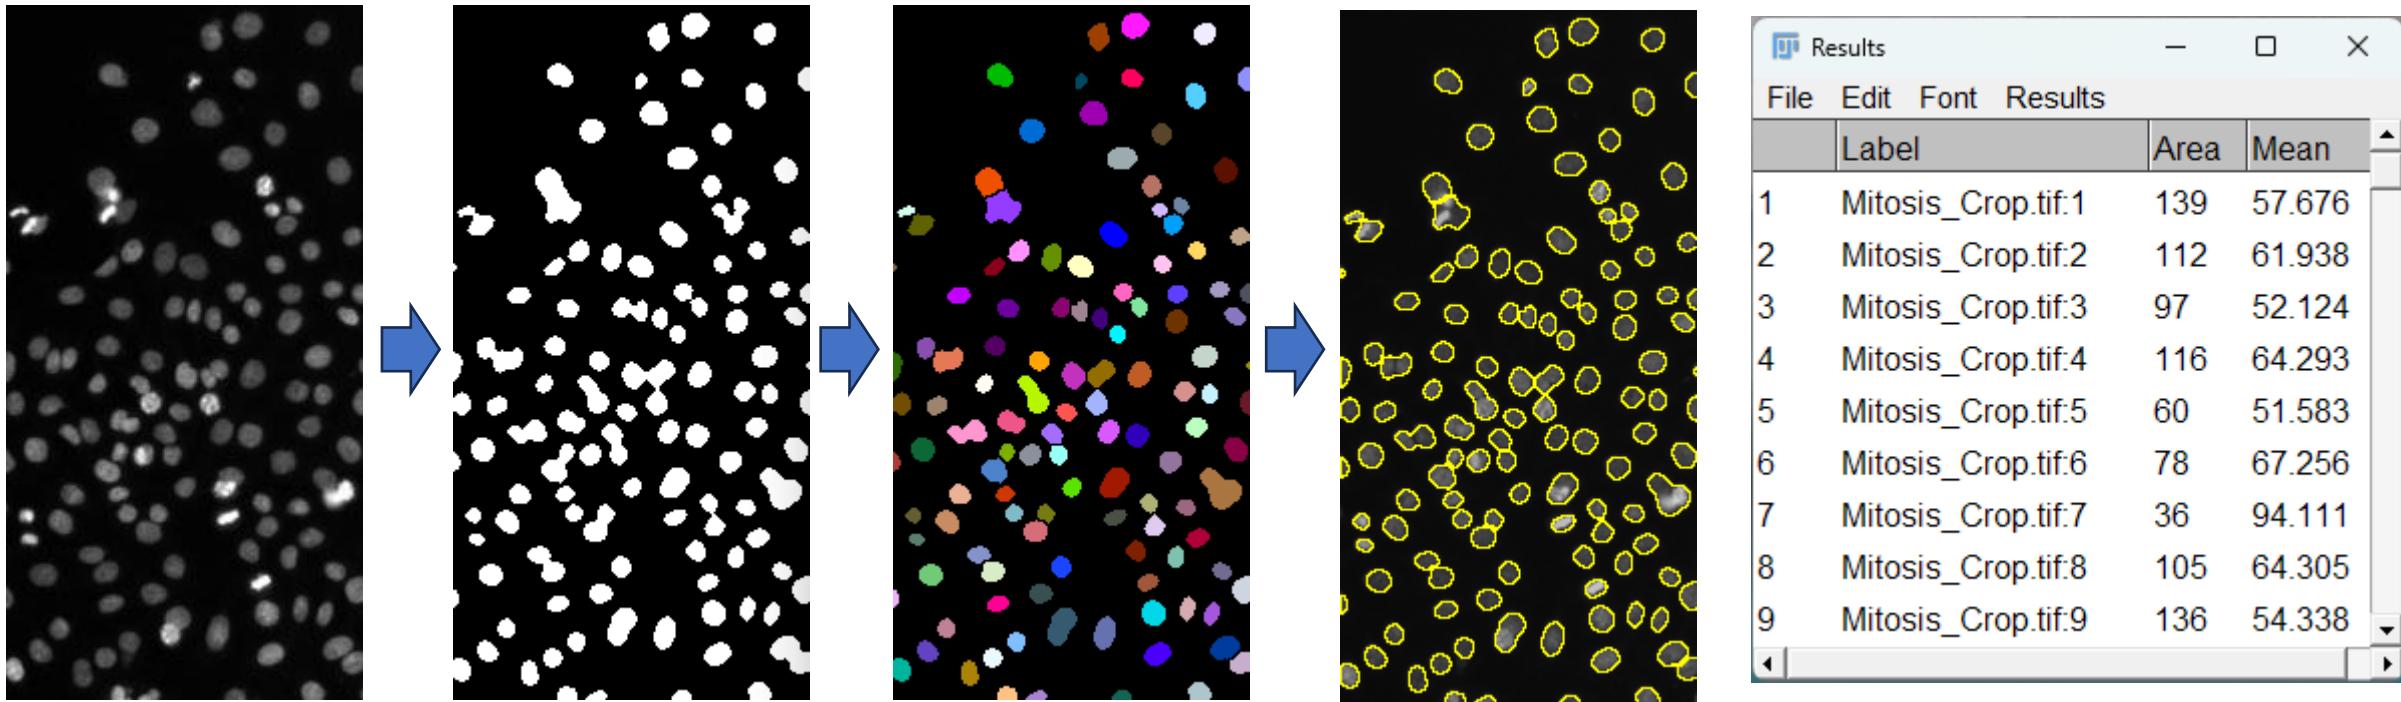

```
open("D:/test.czi");
```

It cannot be recorded properly...

```
run("Bio-Formats Importer", "open=D:/test.czi  
color_mode=Composite rois_import=[ROI manager]  
view=Hyperstack stack_order=XYCZT");
```

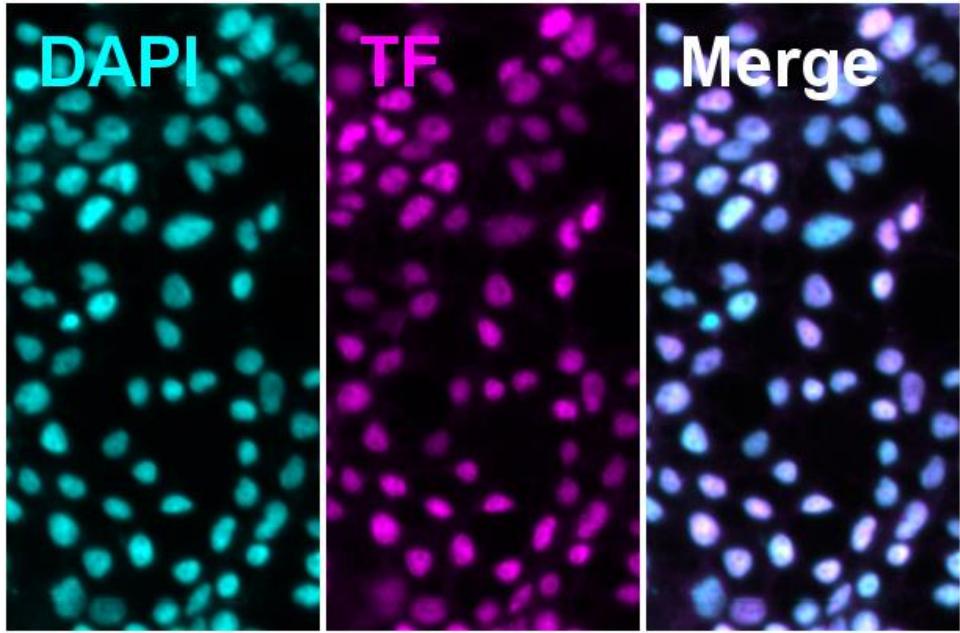

# Single channel thresholding issue on intensity measurement

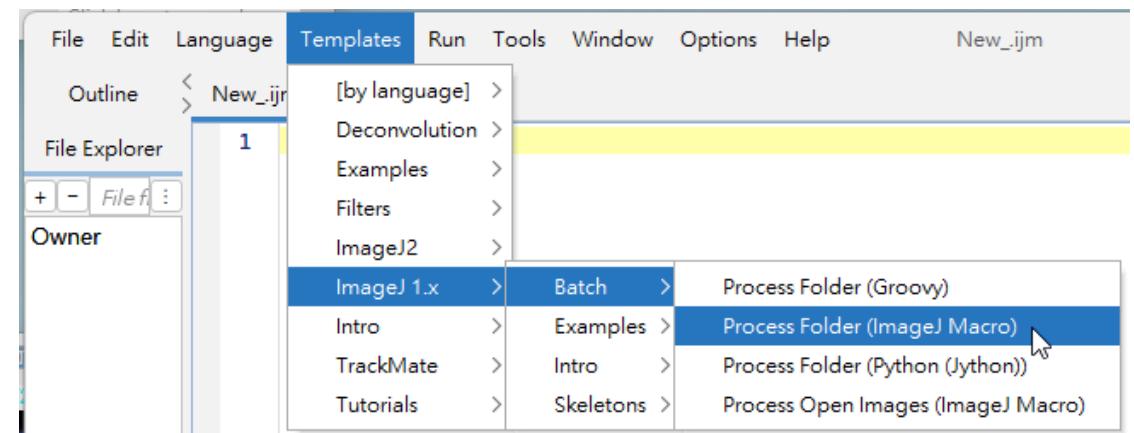

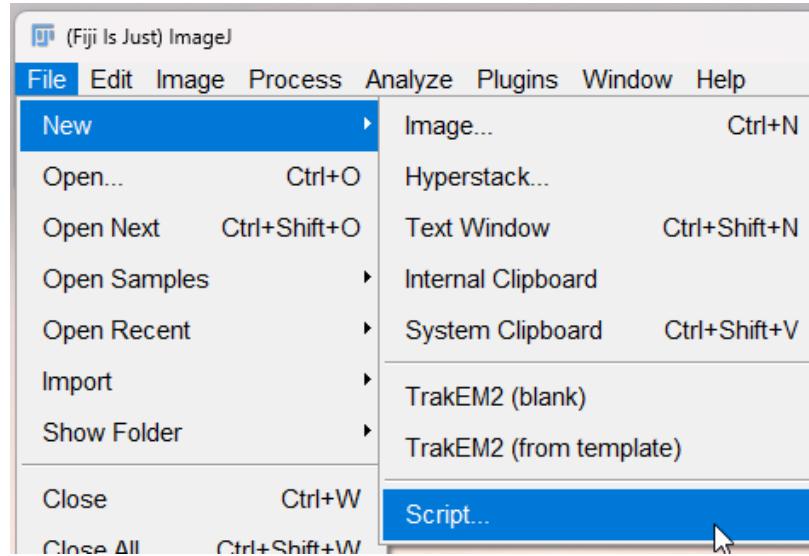

- The segmented area is influenced by intensity variations.  
How can we accurately quantify "intensity" in this context?
- To ensure precise measurement of the target signal's intensity, the region of interest (ROI) should be segmented based on a **separate channel**.

# Exercise 3: Full Workflow and Batch Processing

Goal :

- Measure the area and transcription factor (TF) signal intensity based on DAPI segmentation.
- Export an ImageJ macro using CLIJ, then refine it to ensure reusability across different image files.
- **Integrate your code into batch processing templates.**
- Hint: Split channels first! You can also use the Macro Recorder and refer to the ImageJ Cheat Sheet.

# ImageJ macro cheat sheet

## Macro language elements

```
// comments for code documentation  
numericVariable = 5;  
stringVariable = "text value";  
builtInCommand();
```

## Switch between image windows

```
titleOfCurrentImage = getTitle();  
selectWindow(titleOfAnyImage);
```

## Navigation in image stacks

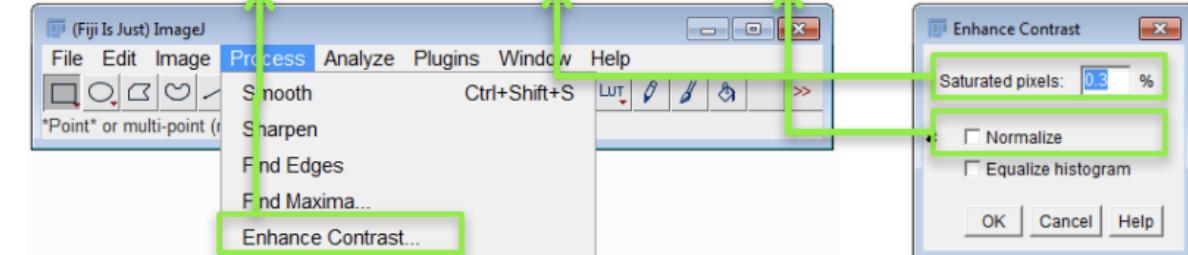

```
Stack.getDimensions(width, height,  
channels, slices, frames);  
  
Stack.setSlice(slice);  
  
Stack.setChannel(channel);  
  
Stack setFrame(frame);  
  
Stack.setDisplayMode("color");  
Stack.setDisplayMode("composite");  
Stack.setDisplayMode("grayscale");
```

## Keep in mind:

- Only one active window!
- One activate channel, slices!
- One ROI list
- One result table!

## Calling any ImageJ/FIJI menu

```
run("Enhance Contrast...", "saturated=0.3 normalize")
```

## Handle image files and folders

```
open(folder+imagefilename);  
close();  
  
fileList = getFileList(folder);  
numFiles = lengthOf(fileList);  
  
for (i=0;i<lengthOf(fileList);i++){  
    file = fileList[i];  
    open(file);  
    // actual image processing...  
    close();  
}
```

## Reading image calibration

```
getPixelSize(unit, pWidth, pHeight);  
getVoxelSize(vWidth, vHeight,  
vDepth, unit);
```

## Result tables

```
run("Set Measurements...", "area  
mean standard min centroid");  
  
corresp.  
to this:  
Area  
Standard deviation  
Min & max gray value  
Mean gray value  
Modal gray value  
Centroid
```

```
run("Analyze Particles...",  
"add clear display");  
  

```

```
roiManager("Measure");
```

```
rowCount = nResults();  
value = getResult("column title",  
rowNumber);  
setResult("column title",  
rowNumber, newValue);  
saveAs("Results", "myResults.xls");  
run("Clear results");
```

## ROI manager

```
roiManager("add");  
roiManager("split");  
roiManager("delete");  
roiManager("reset");  
  
roiManager("measure");  
roiManager("count");  
  
roiManager("open", filename);  
roiManager("save", filename);  
roiManager("save selected", filename);  
  
roiManager("select", index);  
roiManager("select", newArray(index1,  
index2, ...));  
roiManager("deselect");  
  
roiManager("show all");  
roiManager("show all with labels");  
roiManager("show none");  
  
roiManager("and");  
roiManager("combine");
```

# Bonus: Fix funny filename

- File -> Fix Funny Filenames
- Rename files with problematic file or folder names automatically  
image 001.tif → image\_001.tif
- Try it if your ImageJ macro can not find you file or folder!
